Paul Mason

FRONT END DEVELOPER

Profile

Passionate web developer who gets excited about creating front-end applications that tap into the power of APIs and databases. Through collaboration with other developers on projects, I have participated in Scrum standups and have used Jira to help with task management, while committing code using Github.

Recent Projects

Stack Tracker, http://stack-tracker-v2.herokuapp.com/

Software developer job search tool. Find local technology stacks companies need.

- Constructed an asynchronous call to an Indeed job scraper and implemented an html-to-text parser in order to aggregate job postings
- Developed a system of iterating through an array of preset technologies to determine the count of how many technologies show up in each job posting
- Built dynamic component in react which receives this data and renders lists of job posting links sorted by tech name
- Implemented conditional rendering of different animations using React hooks and an animation package

Garden Buddy , https://garden-buddy.netlify.app/

Search information on gardening best practices for 50+ different vegetables.

- Integrated an AJAX call to Gardening API and merged data into a MongoDB schema
- Created a responsive front-end for displaying information pulled from MongoDB
- Devised an algorithm using custom data to include a harvest date if a vegetable is sown the day the user is looking up the information
- Formulated different CSS styles based upon data being used

Employment History

Math Teacher, Lake Elsinore Unified School District

AUGUST 2018 — PRESENT

Math Teacher, Huntington Beach City School District

SEPTEMBER 2013 — JUNE 2018
